DESCRIPTORS: *Photographic film, Processing, *Photographic images, Images, Intensity, *Photographic chemicals, Thallium compounds, Nitrates.

In experiments the effects of the latensification were reflected to a greater extent when the developing time is shorter. This is probably a characteristics of the latensification by a solution of metal salts. The effects of the latensification are decreased when the developing time is prolonged, in the case of latensification by metal salts. The reason lies in the fact that the latent

The study was conducted as proof of the effect of ammonia in the ammonia-pressurization method. First, dicyandiamide was fused into a thin layer at 213°C in order to avoid the accumulation of reaction heat, and by analysing the composition of the reaction system at regular intervals, the intermediate formation of cyanamide, biguanide, cyanomelamine, (Chemistry--Organic, TT, v. 7, no. 5) (over)
